Lid: Stainless Steel, Mirror/Stain

Pail: Stainless Steel, Mirror/Stain

Inner Bin: None

Ring: Plastic, Black

INSTRUCTION

This type of dustbin can be opened or closed automatically based on its ingenious design. When you hand or any object comes into the induction area (about 15cm from the inductive window), the lid will be opened automatically. Then it will be closed automatically once you have put the garbage into it and you hand moves away from the induction area. You never need to touch any part of it. It provides you with the most hygienic and easy treatment of garbage. It needs be powered by 4 pieces of "E" size battery.

Given that you open the dustbin 30 times per day, the battery can work continuously for about 6 months.

Electronic Automatic
Infrared technology
Hygienic, convenient
